

Mobile Sales Dashboard Project Report

Abstract

The Mobile Sales Dashboard project is a data analytics and business intelligence solution developed using Excel and Power BI. The purpose of this project is to analyze mobile sales data and generate meaningful insights through interactive dashboards and visual reports.

Introduction

The Mobile Sales Dashboard project is designed to provide a complete overview of mobile sales performance. The dashboard enables users to monitor revenue, identify best-selling products, analyze customer purchasing patterns, and track market trends.

Objectives

1. To analyze mobile sales data effectively.
2. To create interactive dashboards using Power BI.
3. To identify top-selling mobile brands and products.
4. To analyze monthly and yearly sales trends.
5. To study customer buying behavior.

Problem Statement

Mobile retail businesses often face challenges in tracking sales performance and analyzing customer behavior due to large volumes of data.

Tools and Technologies Used

- Microsoft Power BI
- Microsoft Excel

System Requirements

Hardware:

- Intel i3 or above
- 4GB RAM

Software:

- Windows 10/11
- Power BI Desktop
- Microsoft Excel

Methodology

1. Data Collection
2. Data Cleaning
3. Data Transformation
4. Dashboard Development
5. Data Analysis

Features of the Dashboard

- Total Sales Analysis
- Brand-wise Sales Performance
- Monthly Sales Trends
- Top Selling Products
- Regional Sales Analysis
- Customer Insights
- Interactive Filters

Advantages

- Easy sales monitoring
- Fast decision-making
- Improved business insights
- Interactive dashboard

Future Enhancements

- AI-based sales prediction
- Real-time cloud integration
- Mobile app integration

Conclusion

The Mobile Sales Dashboard project demonstrates how business intelligence tools can transform raw sales data into meaningful visual insights.
